Scientific and Technical Information Center

Requester's Full Name: GREG DELCOTTO Examiner #: 72268 Date: 7/15/06
 Art Unit: 1751 Phone Number 30 272-1312 Serial Number: 10/500469
 Mail Box and Bldg/Rm Location: Rm 9A 39 Results Format Preferred (circle) PAPER DISK E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject-matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: ANTIFOULING DETERGENT FOR HARD SURFACES
 Inventors (please provide full names): SEE B16 SNART

Earliest Priority Filing Date: 2/22/02

For Sequence Searches Only Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

PLRNSR SEARCH ATTACHED CLAIMS

AB A cleaning compn. for hard surfaces contains a polymeric compd. comprising a main backbone derived from (a) at least a quaternary ammonium salt compds. bearing 2 (optionally C1-4 alkyl-substituted) allyl groups, 20-99.9, (b) a hydrophobic unsatd. nonionic monomer that polymerizes in the presence of an initiator, 0.1-80, (c) optionally a water-sol. monomer which is different from previous monomers, <60, and (d) optionally a crosslinking agent 0-10%. The cleaning compn. gives improved soil removal properties, antimicrobial and biofilm suppression properties as well as resistance to resoiling and staining. Thus, a cationic copolymer was prep'd. from diallyldimethylammonium chloride and Me methacrylate.

AB The invention is directed to laundry compns. which deliver both effective softening (softening parameter >70) and effective cleaning, contg.: (a) a cationic polymer having a wt. av. mol. wt. of less than about 850,000 daltons;
 (b) about 1% to about 60% nonionic oil (e.g., sucrose ester); and
 (c) at least about 5% surfactant, wherein the ratio of said cationic polymer to said nonionic oil is less than about 0.25. Ratio of any cationic surfactant to nonionic oil in detergent is <0.2.

AB The compns. comprise (A) emulsified mixts. of droplets of optically isotropic surfactant phase contg. nonionic surfactants, stabilized by emulsifier polymers having anionic segments with affinity to an aq. soln. phase and segments having affinity to the surfactant phase, in the aq. soln. phase contg. electrolyte salts in an amt. to be incompatible with the surfactant phase, (B) adsorbent polymers having cationic segments, and (C) inorg. builder particles dispersing in the mixts., and are manufd. by blending the emulsifier polymers, electrolyte salts, emulsified mixts. contg. the nonionic surfactants and H₂O, and inorg. builder particles, and further blending the adsorbent polymers. Thus, 150 g polyethylene glycol monomethacrylate (NK Ester M 900G) and 150 g methacrylic acid were polymd. in an aq. propylene glycol soln. in the presence of 2-mercaptoethanol, Na₂S2O₈, and H₂O₂ to give a emulsifier polymer soln., 5.3 g (0.7% as polymer in final compn.) of which was added to a soln. of aq. 50% K₂CO₃ 50.9, propylene glycol 7.3, ethylene glycol 6.5, and 50% citric acid soln. 3.2 g, mixed with 64.7 g nonionic surfactant (Softanol 70), emulsified, mixed with an aq. dispersion contg. 50% K₂CO₃ 46.1, polydiallyldimethylammonium chloride (Merquat 100) 5.3, and zeolite A 64.7 g, and stirred to give a detergent compn. showing good cleaning power against soiled fabric and viscosity 540 mPa-s.

AB The invention relates to copolymers consisting of the following amts. of copolymerd. ethylenically unsatd. monomers: 5 to 99% of one or more anionic vinyl monomers (A); 0.01 to 50% of one or more vinyl monomers (B) comprising a quaternary ammonium group or tertiary amino group; 0.5 to 80% of one or more nonionic hydrophilic vinyl monomers (C) and/or 0.1 to 15% of one or more polyfunctional vinyl monomers (F); 0 to 30% of one or more hydrophobic vinyl monomers (D); and 0 to 20% of one ore more vinyl monomers (E) contg. silicone moieties; and wherein the sum of the monomers (A), (B), (C), (D), (E) and (F) is 100%. The invention further concerns the use of those copolymers as anti-soil agents and surface-treating agents, as well as cleaning compns. contg. one or more of the copolymers and a method of their manuf. A polymer was prep'd. from 2-acrylamido-2-methylpropanesulfonic acid, sodium salt, methacrylic acid, polyethylene glycol Me ether methacrylate, and 3-trimethylammoniumpropylmethacrylamide chloride.

AB The fabric and textile conditioning compns. with improved
 particulate soil cleaning ability, contain particular
 combinations of cationic polymers and anionic surfactants in
 combination with a polyvinylpyrrolidone/amphiphilic carboxy-contg.
 polymer anti-redeposition system. More specifically the compns.
 contain (a) .gtorsim.5% \geq 1 anionic surfactant, (b)
 .apprx.0.01-5% \geq 1 amphiphilic carboxy contg. polymer, (c)
 .apprx.0.05-3% polyvinylpyrrolidone, and (d) \geq 1 cationic
 conditioning polymer. The cationic polymers are preferably below a
 particular mol. wt. to afford optimal cleaning and conditioning, and
 must be present in an effective amt. to yield a substantial

conditioning benefit.

AB The invention relates to a formulation which is used to rinse textiles in a hydroalcoholic or aq. medium during laundering. The inventive formulation consists of active substance based on a liq. or solid hydrophobic organosiloxane or org. material in particulate form, a surfactant, and a carrier based on a water-sol. org. polymer, which facilitates deposition of the active substance on

textiles during rinsing. A typical water-dilutable compn. for rinsing textiles to impart creaseproofing was prep'd. by mixing 20 mL emulsion contg. 30% Lubrirob TOD18.80 (sunflower oil) and 3% cetyltrimethylammonium bromide at pH 4 with 1 mL 2.2% aq. soln of 1:1 acrylic acid-DADMAC copolymer (mol. wt. 100,000).

AB A detergent compn. is provided comprising (a) an anionic surfactant, (b) a water sol. cationized polymer having a wt

av. mol. wt. of 100,000 to 2,000,000 and a charge d. of 0.6 to 4 meq/g, and (c) a silicone deriv. having a group contg. both a hydroxy group and a nitrogen atom as a side chain thereof bonded to a silicon atom. The detergent compn. provides rich foaming during washing and at the same time is capable of giving excellent conditioning effects to the hair and the like. For example, a conditioning shampoo was prep'd. contg. (by wt.) sodium polyoxyethylene (2) lauryl ether sulfate 11.0, cationized cellulose (UCare Polymer JR 30M) 0.4, silicone deriv. (Conditioning Agent 8500 from Dow Corning) 1.0, dimethylpolysiloxane (viscosity of 100,000 mPa s) 0.5, cocoamidopropyl betaine 3.0, cocamide MEA 0.5, ethylene glycol distearyl ester 1.0, sodium chloride 0.5, perfume, citric acid as needed, and water to 100%. The shampoo thus obtained (having pH of 6.0 when dild. to 20 times the wt.) was excellent in smoothness and softness of the hair during the period of time from foaming to rinsing, and smoothness after drying.

AB An antifouling detergent for hard surfaces, excellent in soil prevention without corroding metallic materials, comprises: a and a cationic surfactant (b), wherein the polymer (a) contains a monomer unit A having at least one group selected from amino groups and quaternary ammonium groups and a monomer unit B represented by $-SO_2-$, and the content of the monomer unit A in the whole monomer units is 10 to 99 mol-% and the molar ratio of the monomer unit B/the monomer unit A is from 0.01 to 1.

AB Title cleaning or microemulsion compns., esp. effective in the removal of oily or greasy soils, contains a pos. charged surfactant-polymer complex, a hydrocarbon ingredient, a cosurfactant, and water. Thus, a compn. was prep'd. by mixing sodium paraffin sulfonate 0.07, Merquat 550 (dimethyldiallylammonium chloride-acrylamide copolymer) 0.5, and water, showing grease release performance 28 Nbr. of gardner strokes, and soil removal 89%.

 AB Title compn. contains a polymer having av. wt. mol. wt. of 1,000-6,000,000, derived from a polymerizable unsatd. compd. contg. at least 1 of quaternary ammonium groups or tertiary amino groups. Thus, a compn. was prep'd. by mixing Merquat 280 (acrylic acid-dimethyldiallylammonium chloride copolymer) 0.1, alkyl glucosides 6, di-Me benzylammonium chloride (antibacterial agent) 0.1 part, other ingredients, and water. The compn. demonstrated excellent antifouling property, detergency, abrasion resistance to plastics, and anticorrosion to aluminum.

AB Four polyelectrolyte-surfactant complexes with com. surfactants: Fluowet SB, Zonyl FSA, FSE, and FSP and poly(diallyldimethylammonium chloride) were prep'd. and evaluated as dispersants in coating formulations. The complexes have a lamellar structure and mostly planar interfaces, except the Zonyl FSE complex, for which has an addnl. regular structure element assumed to be hexagonally arranged perforations in the lamellae. The complexes provide repellency of polar and non-polar substances, low surface energy, good thermal and mech. stability, and ease of processing into thin films. Coatings formulated with the complexes can provide protection of building structures and machinery from fouling or environmental contamination and can be used for self-lubrication of machine parts. A perforated lamellar structure, such as that of the Zonyl FSE complex can be used to enrich O₂ from air for biomedical purposes.

AB Aq. stable, preferably concd., aq. liq. textile softening compns. comprise fabric softener active and 0.001-10% cationic polymer in the continuous aq. phase, where diester quaternary ammonium compds. of fatty acyl groups have an I value 5-140. The cationic polymers provide addnl. benefits such as dye transfer inhibition, Cl scavenging to protect fabrics, cotton soil release benefits, etc. Thus, a fabric softener contained diester (83%) 28.2, HCl 1.50, silicone antifoam 0.25, CaCl₂ 8.00, soil release polymer 1.25, diethylenetriaminepentaacetic acid soln. 9.00, perfume 1.28, ammonium chloride (25%) 0.40, Cypro 514 cationic polymer 0.4, colorant 0.68 parts, and the balance water.

IT 26062-79-3, Magnifloc 587C

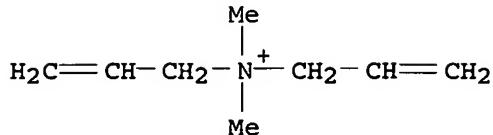

RL: MOA (Modifier or additive use); USES (Uses)
(concd. quaternary ammonium fabric softener compns. contg. cationic polymers for storage stability, softness, static guard, dye and bleach protection)

AB Polymers useful in saline waters as alk. earth sulfate and CaCO₃ deposition inhibitors contain 50-99.5% alkenesulfonic acids CH₂:C(R₁)ZSO₃R₂ [R₁ = H, Ph, alkyl; R₂ = H, alkyl, NH₄, alkali metal or alk. earth ion; Z = (CH₂)_n (n = 0-4)] and 50-0.5% phosphonic acid deriv. CH₂:CHPO(OR₁)(OR₂) (R₁, R₂ = H, alkyl, NH₄, alkali metal or alk. earth ion). Persulfate-initiated polymn. of 90 g ethenesulfonic acid and 10 g vinylphosphonic acid in 120 g H₂O at 60° gave a clear, slightly viscous soln. of copolymer (I) with wt.-av. mol. wt. 10,000. The min. concn. of I required to inhibit mineral deposit formation (BaSO₄, tube plugging test) was 15 mg/L.

AB Comps. for the simultaneous washing and softening of textiles in water at $\geq 60^\circ$ contain a nonionic surfactant 1-20, a quaternary ammonium compd. (softener) 2-20, and an amphoteric surfactant $\leq 10\%$ as well as 0.5-10% of a compd. which increases the substantivity of the softener to the textiles, i.e., a bisquaternary ammonium compd., a polymer of diallyldimethylammonium chloride, cationic guar gum, maleic acid-Me vinyl ether copolymer, or a diimidazolinium compd. The nonionic surfactant alone or with the amphoteric surfactant gives a compn. which upon addn. in 1% concn. to wash water has a turbidity point above the temp. of the wash water. The detergent-softener compns. give good soil removal during laundering. Thus, a detergent-softener compn. contained ethoxylated (20 mols) nonylphenol 15.0, Na5P3O10 42.0, dimethyldistearylammonium chloride (I) 6.45, Adogen 477 3.0, and other components 33.55%. This compn. was used (100 g in .apprx.20 L water) at 60° for the laundering-softening of fabrics, giving softness similar to that obtained by adding I to the fabrics in the rinsing stage following washing.

AB A cleaning compn. for removing dirt from unfinished leather comprises a silicic acid dispersion, a polymeric cationic active compd., and an emulsifier-dispersant system. Thus, a flexible foam sponge was moistened with H₂O, pressed out well, and a cleaning compn. comprising a silicic acid dispersion 1.00, poly(dimethyldiallyl ammonium chloride) [26062-79-3] 0.04, a lower ethoxylated alkylphenol 0.01, and alkylphenol glycol ether 0.20, and H₂O 98.75% was poured on. The soiled spots were softly rubbed, and the soiled sponge was thoroughly rinsed with running water and pressed out. The cleaning agent was poured on the sponge, and the treatment was repeated until the sponge took up no more dirt.

AB Acrylamide-diallyldimethylammonium chloride copolymer [26590-05-6] with mol. wt. >1,000,000 is used (1.5-20.0%) with alk. builders, wetting agents, etc., to prep. detergents for use in app. for cleaning floors. Cleaning solns. contg. the detergents are filtered to remove soil, and the solns. are reused. The copolymer (flocculant) improves the filtration of the solns.

AB Detergent compns. are prep'd. which contain a flocculant and are esp. useful for the removal of soil from floors and other surfaces. The flocculant is a polymer of diallyldimethylammonium chloride (I) and/or acrylamide, guar gum [9000-30-0], or a cationic polyamine. Thus, a detergent conc. contained Na5P3O10 7, KOH 5.3, soda ash 2.2, Triton BG-10 1.5, I polymer [26062-79-3] (mol. wt. 100,000, 40% soln.) 14, and water 70%. The dirt-holding capacity of this cleaning soln. was >35 times the wt. of the polyelectrolyte present.

AB Cleaning solns., esp. useful for cleaning floors, contained water, alkaline builders, wetting agents, and flocculating agents, such as poly(diallyldimethylammonium chloride) (I) [26062-79-3] or polyacrylamide [9003-05-8], which caused agglomeration of soil particles in the used cleaning solns. and permitted reuse of the solns. after filtration. Thus, a concd. cleaning soln. comprised Na tripolyphosphate 7, KOH 5.3, soda 2.2, Triton BG-10 (nonionic surfactant) 1.5, I (mol. wt. 100,000) 1.4, and water 70%.
